Improving Outcomes
with
Advanced Options

Shalin Sanghvi, MD

Dr. Shalin Sanghvi began his education focused on engineering, but he found himself wanting more from his field of study. His passion for helping people and building personal connections led him to medicine and the specialty of nephrology.

About Dr. Sanghvi

Dr. Sanghvi works with all of his patients to understand their individual health goals and educate them about diseases and health concerns. He has seen the impact education can have on patients and how it can help them work toward long-term outcomes. He loves being able to provide a cohesive patient experience by being involved throughout the diagnosis and treatment processes.

When he isn't working, Dr. Sanghvi enjoys spending time with his wife and three children, traveling and playing tennis.

About AVC

Advanced Vascular Centers offer the most current applications of existing techniques, including embolotherapy, interventional oncology, cutting-edge devices, and imaging technologies to provide the highest quality of care to patients.

Choose The Advanced Option

Compared to conventional open surgery, Interventional Radiology offers less pain, less blood loss, lower risk of infection, and faster recovery time. Patients go home the same day, and walk out just hours after their procedure. Procedures performed at AVC require only light or moderate sedation.
